

BEFORE YOUR COMPANY INTRODUCES AI RULES...

Read this first.

ONE DAY YOUR EMPLOYER MAY ASK:

**"Have you completed the new AI
compliance training?"**

It already happened in parts of
Europe.

Could your workplace be next?

WHY THIS MATTERS

Many technical communicators are still debating whether AI belongs in documentation.

Meanwhile...

Organizations are beginning to ask a different question:

How can employees use AI safely and responsibly?

WHY NOW?

The European Union introduced the world's first comprehensive AI regulation, the EU AI Act.

As organizations adapt, many are introducing AI governance, internal policies, and employee guidance.

Whether similar regulations arrive in your country sooner or later, one trend is already clear:

Responsible AI use is becoming part of professional work.

THIS ISN'T JUST EUROPE

AI governance is expanding worldwide.

South Korea

China

Colorado (U.S.)

United Kingdom

Brazil

Canada

Different rules. Shared momentum.

WHAT COULD CHANGE AT WORK?

Future AI policies may answer questions like:

- Which AI tools are approved?
- When is human review required?
- How should AI-generated work be documented?

These aren't just legal questions.
They're becoming workflow questions.

WHAT THIS MEANS FOR TECHNICAL WRITERS

You already handle:

- ✓ Confidential information
- ✓ Internal documentation
- ✓ Release notes
- ✓ Customer knowledge

AI policies may soon become as routine as style guides and security training.

AI POLICY CHECK

Which of these would your company's AI policy allow?

- Using AI to rewrite release notes
- Uploading internal documents
- Publishing AI-generated procedures
- Using customer tickets as AI input

Would you know the correct answers?

THE GOAL ISN'T TO STOP AI

Good AI policies are designed to help employees:

- ✓ Protect confidential information
- ✓ Improve consistency
- ✓ Reduce legal risk
- ✓ Build trust

The objective is responsible use—not avoiding AI altogether.

START PREPARING TODAY

Build habits like:

- verifying AI output
- protecting sensitive data
- citing reliable sources
- following company guidance

These habits will remain valuable
regardless of where you work.

REGULATIONS WILL EVOLVE

AI tools will evolve.

Your value as a technical
communicator will come from
knowing **when AI helps...**

and **when human judgment must
lead.**
